Testing - Milestone 4: Automated Testing Strategy & P0 Verification

This document specifies the testing strategy, test case catalog, automated test suite, and defect analysis for Milestone 4. It proves that the Sports Venue Booking System functions deterministically under continuous change, that business rules (`BR1`–`BR19`) are enforced, and that every P0 user story is continuously safeguarded by fast, reproducible automated tests.

Live production deployment: https://g9-venue-booking-demo.vercel.app.

---

1. What we test, and why

Layer test coverage matrix

Layer	Component & Path	Test Type	Tools & Technique	Why / Risk Justification
Services / Business Logic	`src/booking.py` `src/pricing.py` `src/venues.py` `src/auth.py`	Unit & Service Integration	`pytest`, temporary SQLite fixture, in-memory isolation	**Highest Risk:** All core business rules (`BR1`–`BR19`) live here. Double-booking prevention, atomic concurrency locks, peak segment pricing, duration limits, and account lockout logic are calculated here. A flaw here costs real money or causes venue scheduling chaos.
Data Access / Repository	`src/db.py` `src/schema.py` `src/init_db.py`	Database Constraint Testing	`pytest`, SQLite temporary databases (`tmp_path`)	**High Risk:** Acts as the impenetrable second line of defense (ADR 2). Tests verify table constraints, unique index enforcement (`UNIQUE(venue_id, slot_start)`), foreign key cascades, and schema integrity without touching production data.
Application Routes / API	`src/app.py` `src/routes/auth.py` `src/routes/venues.py` `src/routes/owner.py`	Functional Route / API Testing	Flask test client (`app.test_client()`)	**Medium Risk:** Ensures HTTP status codes (200, 201, 302, 400, 401, 403, 404, 409, 410, 422, 423), session lifecycle (30-minute idle timeout BR8), JSON error payload structures (`{"error": ..., "rule": ...}`), and role-based redirects.
User Interface	`src/templates/*.html` `src/static/style.css`	Manual exploratory walkthrough & contract tests	Browser-based user verification walkthrough	**Low Automation Priority:** Verified thoroughly in Milestone 3 with real user walkthroughs. UI layout changes frequently, while HTML contracts and form field retention on errors are already covered by route assertion tests.

Risk Assessment & Testing Focus

Our testing effort is deliberately concentrated where bugs cause irreparable operational failures: 1. **Concurrency and Scheduling Collisions (`src/booking.py`):** Two customers confirming the exact same pitch at the exact same second is the most catastrophic failure mode for a sports venue booking platform. We test both application-level locks (`BEGIN IMMEDIATE`) and database constraints (`UNIQUE(venue_id, slot_start)`), including multi-threaded race condition tests (`threading.Barrier`). 2. **Dynamic Segment Pricing (`src/pricing.py`):** Hanoi pitches switch from standard to peak pricing at 17:00 on weekdays. Booking across this boundary (e.g., 16:00 to 18:00) must calculate the exact proportional sum across segments rather than rounding up or down (`BR12`). 3. **Security, Rate Limiting & Access Control (`src/auth.py`, `src/guards.py`):** Brute-force protection locks accounts after 5 failed attempts (`BR5`), session timeouts expire after 30 idle minutes (`BR8`), and customers are strictly prevented from viewing other customers' bookings or accessing owner portals (`BR14`).

---

2. Test cases for every P0 story

Every P0 story is covered by at least three test cases: at least one normal case that succeeds, at least one error case where a business rule refuses invalid input, and boundary cases on both sides of numerical limits (duration, pricing, character length, attempt counters).

ID	Story	Category	Input & Condition	Expected Result	Kind
TC-01	**US01** Customer registration	Normal	Valid email, phone (`0901234567`), 11-char password (`sanbong1`)	Account created, 302 redirect to `/login`, `email_verified_at IS NULL` (BR4)	normal
TC-02	**US01** Customer registration	Error	Duplicate email address `minh@example.com` (case-insensitive)	HTTP 409 Conflict, `"This email is already in use"`, no second user saved (BR1)	error
TC-03	**US01** Customer registration	Boundary	Password of 7 characters (`sanbong`)	HTTP 400 Bad Request, `"Password must be at least 8 characters"` (BR2)	boundary, just below
TC-04	**US01** Customer registration	Boundary	Password of 8 characters with 1 letter and 1 digit (`sanbong1`)	Accepted, 302 redirect, account registered (BR2)	boundary, on limit
TC-05	**US01** Customer registration	Boundary	Phone number of 9 digits (`091234567`)	HTTP 400 Bad Request, `"Phone number must be 10 digits"` (BR3)	boundary, just below
TC-06	**US01** Customer registration	Error	Phone not starting with 0 (`1912345678`)	HTTP 400 Bad Request, `"Phone number must start with 0"` (BR3)	error
TC-07	**US01** Customer registration	Boundary	Verification token age 24 hours and 1 minute	HTTP 410 Gone, `"This verification link has expired"` (BR4)	boundary, just above
TC-08	**US02** User login	Normal	Correct credentials for customer `minh@example.com`	302 redirect to `/dashboard`, session created, customer name displayed (BR7)	normal
TC-09	**US02** User login	Normal	Correct credentials for owner `lan.owner@example.com`	302 redirect to `/owner/venues` (BR7)	normal
TC-10	**US02** User login	Error	Non-existent email OR incorrect password	HTTP 401, identical error `"Email or password is incorrect"` (BR6)	error
TC-11	**US02** User login	Boundary	4 consecutive incorrect password attempts	HTTP 401, account remains unlocked, counter = 4 (BR5)	boundary, just below
TC-12	**US02** User login	Boundary	5th consecutive incorrect password attempt	HTTP 423 Locked, `"Account temporarily locked. Try again in 15 minutes"` (BR5)	boundary, on limit
TC-13	**US02** User login	Boundary	User inactivity duration of 29 minutes	Session remains valid, dashboard opens HTTP 200 (BR8)	boundary, just below
TC-14	**US02** User login	Boundary	User inactivity duration of 31 minutes	Session expired, redirected to `/login` with session timeout flash (BR8)	boundary, just above
TC-15	**US03** Search venues	Normal	Filter by `sport=Football` and `area=Cau Giay`	HTTP 200, returns Thong Nhat Football Pitch, other sports/areas excluded (BR9)	normal
TC-16	**US03** Search venues	Error	Hand-typed / unlisted sport (`sport=Golf`)	HTTP 400 Bad Request, `"Please choose a sport from the list"` (BR9)	error
TC-17	**US03** Search venues	Boundary	Query yielding 0 matching venues (`Tennis` in `Hoan Kiem`)	HTTP 200, explicit message `"No venues found"`, table hidden (BR9)	boundary, zero match
TC-18	**US04** Venue details	Normal	Venue 1 on Tuesday (16 total slots: 3 booked, 13 free)	HTTP 200, 13 slots marked `"free"`, 3 marked `"booked"` (BR10)	normal
TC-19	**US04** Venue details	Boundary	Date set to yesterday (`today - 1 day`)	HTTP 400 Bad Request, `"Please choose today or a later date."` (BR10)	boundary, just below
TC-20	**US04** Venue details	Error	Query availability with malformed date (`20-10-2026`)	HTTP 400 Bad Request, invalid date format (BR10)	error
TC-21	**US04** Venue details	Boundary	Request venue photos for Venue 1 vs Venue 2	Photo isolation: photo of venue 2 never appears on venue 1	boundary, isolation
TC-22	**US05** Book a venue	Boundary	Book duration of 0 hours	BusinessRuleError refused, `"1 to 4 consecutive hours"` (BR11)	boundary, just below
TC-23	**US05** Book a venue	Boundary	Book duration of 1 hour (minimum allowed)	HTTP 201 / booking confirmed with code `BK-xxxxxx` (BR11)	boundary, on lower limit
TC-24	**US05** Book a venue	Boundary	Book duration of 4 hours (maximum allowed)	HTTP 201 / booking confirmed covering 4 consecutive slots (BR11)	boundary, on upper limit
TC-25	**US05** Book a venue	Boundary	Book duration of 5 hours	BusinessRuleError refused, `"1 to 4 consecutive hours"` (BR11)	boundary, just above
TC-26	**US05** Book a venue	Normal	Book 19:00–21:00 crossing 20:00 peak boundary on Tuesday	Total = 750,000 VND (1h peak 450k + 1h standard 300k, two price lines) (BR12)	normal
TC-27	**US05** Book a venue	Error	Two threads confirming the exact same slot at the same time	Exactly 1 booking created (201), 1 refused with 409 `"slot taken"` (BR11, ADR 2)	error / race condition
TC-28	**US05** Book a venue	Error	Unverified customer tries to book a slot	HTTP 403 Forbidden, `"Please verify your email before booking"` (BR4)	error

ID	Story	Category	Input & Condition	Expected Result	Kind
TC-29	**US06** Owner adds venue	Normal	Owner submits valid venue name, dropdowns, price, and PNG photo	302 redirect, venue created in DB, photo saved to upload directory (BR13)	normal
TC-30	**US06** Owner adds venue	Boundary	Hourly price = 999 VND (minimum is 1,000)	HTTP 422, `"Hourly price must be between 1,000 and 100,000,000 VND"` (BR13)	boundary, just below
TC-31	**US06** Owner adds venue	Boundary	Hourly price = 100,000,001 VND (maximum is 100,000,000)	HTTP 422, `"Hourly price must be at most 100,000,000 VND"` (BR13)	boundary, just above
TC-32	**US06** Owner adds venue	Boundary	Venue name length = 2 characters (`"Sa"`)	HTTP 422, `"Venue name must be 3 to 100 characters"` (BR13)	boundary, just below
TC-33	**US06** Owner adds venue	Boundary	Venue name length = 101 characters	HTTP 422, `"Venue name must be 3 to 100 characters"` (BR13)	boundary, just above
TC-34	**US06** Owner adds venue	Boundary	Photo upload size = 5 MB + 1 byte	HTTP 413 Payload Too Large / 422, file size limit exceeded	boundary, just above
TC-35	**US06** Owner adds venue	Error	Customer account attempts to access `/owner/venues/new`	HTTP 403 Forbidden, customer denied access to owner portal (BR14)	error

3. Automated tests

Execution Command

The entire automated test suite runs locally without requiring a running server, network connectivity, or the live database:

```
# Activate your virtual environment first
source .venv/bin/activate       # Windows: .venv\Scripts\Activate.ps1

# Run the complete test suite with verbose output
python -m pytest -v
```

Pytest Execution Output

All 89 tests pass deterministically in approximately 22 seconds on an isolated temporary SQLite database fixture:

```

4. What the tests found

Flaky Regression: Date-dependent seed collision in booking uniqueness test

- **The Issue:** In Sprint 3, seed data generation was modified (`d73f47c`) to compute seed booking dates relative to `date.today()` (`next_weekday(1)` for Tuesdays). However, `tests/test_booking.py` had pinned test fixtures to an arbitrary fixed Tuesday (`2026-10-13`). When test execution occurred on dates where `next_weekday(1)` dynamically calculated Tuesday 2026-10-13, the seeded database already contained a booking for Venue 1 (`BK-000103` or `BK-000106`).

When `test_unique_constraint_catches_what_the_recheck_misses` ran: `python assert conn.execute("SELECT COUNT(*) FROM booking WHERE start_at LIKE '2026-10-13%'").fetchone()[0] == 1` The test expected exactly 1 booking for the whole day, but encountered 2 (the seeded booking + the newly inserted test booking), turning the test suite RED.

- **The Red Test Output:** ```text __ test_unique_constraint_catches_what_the_recheck_misses __ with connect(db) as conn:

  ```
  assert conn.execute("SELECT COUNT(*) FROM booking WHERE start_at LIKE '2026-10-13%'").fetchone()[0] == 1
  ```

  E assert 2 == 1

tests/test_booking.py:138: AssertionError ========== short test summary info ========== FAILED tests/test_booking.py::test_unique_constraint_catches_what_the_recheck_misses ========== 1 failed, 87 passed in 22.12s ========== ```

- **The Fix & Guarding Test:** The test was verifying whether the database `UNIQUE(venue_id, slot_start)` constraint prevents duplicate rows for a specific slot when application-level checks are skipped. The broad wildcard query `WHERE start_at LIKE '2026-10-13%'` was flawed because it conflated other bookings on the same calendar day with the slot under test.

In PR #92 (Issue #88), the assertion was corrected to inspect the exact slot under test: `python assert conn.execute( "SELECT COUNT(*) FROM booking WHERE start_at = '2026-10-13 18:00'" ).fetchone()[0] == 1` This guarantees that even if dynamic seed data places other bookings on the same calendar day, the test accurately and strictly verifies that the collision on `18:00` was blocked by the database constraint.
